Transition Saddle Range

GFS | TRANSITION SADDLE FEATURES

Code: S701
Sizes: 17" & 17.5"
Colours: Black and Brown
Standard: Wide

The GFS Transition GP is an extremely versatile saddle suiting a wide variety of horses with a standard wither. The saddle has X-change girthing points for ease of changing with no stitching. Knee blocks can be customised to suit the riders leg length with an option of a bigger or smaller block these sit below the flap with a contoured moulded knee. The centre of balance spot conveniently locates you in a neutral position for close contact. The GFS saddle range leather is selected from the finest double stitched calf skin.

The traditionally designed carbon fibre webbed tree is flexible which gives comfort to both horse and rider allowing movement in conjunction with the horse. Each tree is adjustable and made to precision by using cutting edge CAD design.

GFS | TRANSITION GP

Moulded knee blocks for security in the saddle

Raised padding for an instantly worn feel

Finest quality selected leather

GFS | TRANSITION SADDLE FEATURES

Code: S703
Sizes: 17" & 17.5"
Colours: Black and Brown
Standard: Wide

The GFS Transition Jump is a forward cut saddle especially for jumping suiting a wide variety of horses with a standard wither. Knee blocks can be customised to suit the riders leg length with an option of a bigger or smaller block these sit below the flap with a contoured moulded knee. The centre of balance spot conveniently locates you in a neutral position for close contact. The GFS saddle range leather is hand selected from the finest double stitched calf skin.

The x-change girthing points create an easy way for saddle fitters to change the straps from one position to another without having to leave the horse and go to the workshop to stitch.

GFS | TRANSITION SADDLE FEATURES

Code: S702
Sizes: 17" & 17.5"
Colours: Black and Brown
Standard: Wide

The GFS Transition Cob is especially suited to a wider framed and flatter backed horse. The panels are flatter than an average saddle to distribute weight and pressure evenly which also helps with the perfect fit solution. Each tree is adjustable and made to precision by using cutting edge CAD design. The saddle has Xchange girthing points for ease of changing girthing points with no stitching. Knee blocks can be customised to suit the riders leg length with an option of a bigger or smaller block these sit below the flap with a contoured moulded knee. The centre of balance spot conveniently locates you in a neutral position for close contact. The GFS saddle range leather is hand selected from the finest double stitched calf skin.

The GFS Transition range have flatter and wider panels to distribute weight evenly on the horses back to prevent pressure for maximum comfort for the horse. The panels are flocked with siliconized wool which allows movement to prevent possible bunching which could lead to pressure points.

GFS | TRANSITION COB

Choice of two length
knee blocks to customise
room in the seat

GP style seat for security
without restriction

Wide channel to fit a
flatter backed horse

Why the GFS Transition saddles are different

The GFS Transition range is beyond extraordinary, built on a traditionally shaped carbon fibre webbed tree each saddle is made to precision. With comfort at the heart of the saddle range all features are designed around the horse and rider's best interest. The saddle panels are wider and flatter than an average saddle to distribute any pressure on the horses back. The webbing on the tree allows movement for both horse and rider to prevent restriction. Moulded knee blocks give the rider the best possible security in the saddle, a choice of two sized knee blocks prevent restriction of the leg for all leg lengths.

Tried and tested

GFS Transition saddles have been tried and tested to aim to improve performance for both horse and rider. Over months of testing the saddles they have been sent for alteration on numerous occasions when improvements have been discovered for the best possible outcome. After months of testing and amending, the saddles are in their highest form to suit a wide variety of horse and riders with comfort and performance at the heart.
